The Complete Operator Guide

RequityAI — Facebook Ads for Real Estate Investors

Version 1.0 — April 2026

For: Operators building and managing Facebook ad campaigns

Owner: Andrew Cherry

Contents

Part 1 — System Overview — Where Everything Lives

Part 2 — All 21 Automations Explained

Part 3 — Client Onboarding Playbook

Part 4 — Campaign Build Playbook — Micro-Step Instructions

Part 5 — QA Checklist

Part 6 — Weekly Operating Rhythm

Part 7 — Optimization — The Decision Framework

Part 8 — Communication Rules

Part 9 — Quick Reference

Andrew chooses which videos run. You build what is approved. You launch what is approved. You track what is live.

Part 1: System Overview

Agency OS is built across 6 connected platforms. Here is what each one does and where you will spend your time.

Platform	What It Does	Your Access
SmartSuite	Command center. All client data, campaigns, tasks, reviews, and scripts live here.	Full access (except Finance app)
n8n (Cloud)	Automation engine. 21 workflows run in the background — you do not touch n8n directly.	No direct access needed
Slack	Communication hub. Automations post alerts here. You message Andrew here.	Full access
Meta Ads Manager	Where you build and manage Facebook/Instagram ad campaigns.	Access via client ad accounts
Windsor AI	Pulls Facebook ad metrics automatically into SmartSuite every 12 hours.	No direct access needed
Close CRM	Sales pipeline. Andrew manages this. You may see references to it.	View only (if applicable)

SmartSuite Apps — Your Workspace

SmartSuite has 7 apps. Think of them as steps in a process, left to right:

App	What It Is For
Clients	Every client record. Status, contacts, setup progress, onboarding checklist.
Scripts	60 pre-approved video scripts. Your reference library — search by Script Key (DSREI-01 through DSREI-60).
Creative Assets	Recorded videos from clients. Linked to their script. Approval tracking.
Campaigns	Every live ad campaign. You build records here, track metrics, flag for review.
Tasks	Your daily task queue. This is your home base. Work top to bottom.
Reviews (Optimization)	Andrew's decision board. You log metrics. Andrew decides Keep/Cut/Retarget/Lead Ad.
Finance	Andrew only. You do not have access.

Slack Channels

Channel	Purpose

#team-tasks	Automated notifications: new tasks, QA checklists, campaign alerts, weekly skeleton tasks. This is where automations post.
DMs from AgencyOS Bot	Direct messages to Andrew: blocked tasks, completed tasks, CPL scale signals, metrics summaries.

Part 2: All 21 Automations Explained

These automations run in the background. You do not need to configure them. Understanding what they do helps you know why Slack messages appear and why certain fields update automatically.

SmartSuite-Native Automations (10)

These run inside SmartSuite itself — triggered by field changes or status updates.

S1: New Client → Create Onboarding Tasks

When a new client is added, SmartSuite auto-creates the standard onboarding task set.

S2: Campaign QA Complete → Notify Andrew

When all 9 QA checkboxes are checked, Andrew gets notified the campaign is ready for final approval.

S3: Campaign Status → Live → Set Launch Date

When you change a campaign to Live, the launch date is auto-set to today.

S4: Video Approved → Create Campaign Draft

When Andrew approves a creative asset, a draft Campaign record is auto-created.

S5: Task Overdue → Flag

Tasks past their due date get automatically flagged for attention.

S6: Client Status Change → Update Dashboard

Client status changes ripple through to dashboard rollup fields.

S7: Review Created → Link to Campaign

New review records auto-link to their parent campaign.

S8: Onboarding Complete → Move to Active

When all onboarding checkboxes are done, client status moves to Active.

S9: Decision Made → Create Follow-Up Task

When Andrew makes a Keep/Cut/Retarget/Lead Ad decision, a task is auto-created for you.

S10: Campaign Cut → Archive

Cut campaigns auto-move to the archive view.

n8n Cross-Platform Automations (11 Active Workflows)

These run on n8n cloud every 12 hours (or weekly where noted). They connect SmartSuite, Slack, Windsor AI, and Facebook.

N1: 72-Hour Review Trigger

Every 12h, checks for campaigns launched 3+ days ago that don't have a review record yet. Creates the review record and posts an alert to #team-tasks.

> **What you see:** You see: Alert in #team-tasks saying a campaign is ready for review.

N2: Decision Router

Every 12h, reads Andrew's decisions from the Reviews app and executes them automatically.

> **What you see:** Cut → marks campaign as Cut + creates archive task. Retarget Test → creates new MOF campaign draft + build task. Lead Ad Candidate → creates new BOF campaign draft + build task. Keep Running → sets next review date to 3 days out. Posts summary to Slack.

N3: Creative Fatigue Alert

Weekly check for campaigns running 28+ days. Posts a reminder to #team-tasks to review for creative fatigue.

> **What you see:** You see: List of long-running campaigns that may need fresh creative.

N4: Campaign Live → Set Next Action Date

Every 12h, finds Live campaigns without a due date and sets the next action to Thursday (metric pull day).

> **What you see:** You see: Due dates auto-populated on campaign records.

N5: Weekly Skeleton Tasks

Every Monday at 6am, creates 4 standard weekly tasks: Pull metrics (due Thu), QA check (due Fri), Review stale tasks (due Fri), Ad account compliance check (due Fri). Posts summary to #team-tasks.

> **What you see:** You see: Monday morning task list ready in your queue.

N6: Task Blocked → DM Andrew

Every 12h, finds tasks marked Blocked that haven't been escalated yet. DMs Andrew with the task name, type, assignee, and blocker reason. Marks as escalated so it only alerts once.

> **What you see:** You see: Nothing — this is Andrew's alert. But it means you should always fill in the Blocker Reason field.

N7: Windsor Metrics Sync

Every 12h, pulls Facebook ad metrics from Windsor AI and writes them directly into SmartSuite campaign records. Updates: spend, ThruPlays, cost/ThruPlay, 50/75/95% views, saves, comments, DMs, leads, cost/lead. DMs Andrew with summary.

> **What you see:** You see: Metrics auto-populated in campaign records. You still verify on Thursdays but the heavy lift is automated.

N8: CPL Threshold Alert

Every 12h (after metrics sync), checks for Live campaigns with 3+ leads and CPL below $75. DMs Andrew with a 'Scale Signal' — these campaigns are ready to scale.

> **What you see:** You see: Nothing — this is Andrew's scaling decision trigger.

N9: Campaign QA Checklist → Slack

Every 12h, finds campaigns in QA Ready status where not all 9 QA boxes are checked. Posts the checklist to #team-tasks showing which checks are done and which are pending.

> **What you see:** You see: QA checklist in Slack showing exactly which boxes still need checking.

N10: Task Assigned → Slack Notification

Every 12h, finds newly created tasks (last 12 hours) with status To Do. Posts the assignment to #team-tasks with task name, type, priority, assignee, and due date.

> **What you see:** You see: New task notifications in #team-tasks.

N11: Task Completed → DM Andrew

Every 12h, finds tasks completed in the last 12 hours. DMs Andrew with confirmation of what was done and by whom.

> **What you see:** You see: Nothing — this confirms your work to Andrew automatically.

Part 3: Client Onboarding Playbook

When a new client signs, work through every item below in order. Check each box in SmartSuite only when it is actually confirmed.

Access and Asset Setup

Checkbox in SmartSuite	What to Confirm	When
Setup: Business Portfolio Access	Confirm the correct business portfolio exists and we have partner access.	Required now
Setup: Facebook Page Confirmed	Confirm the correct Page is visible and usable for ads.	Required now
Setup: Instagram Connected	Confirm the correct Instagram account is connected and visible.	Required now
Setup: Ad Account Visible	Confirm the correct client ad account is visible in Ads Manager.	Required now
Setup: Leads Access Confirmed	Confirm the operator and client have Leads Access in Meta.	Required now
Setup: Lead Notifications Set	Confirm who receives lead notifications and how fast they need to respond.	Required now
OB: Lead Destination Confirmed	Confirm whether leads go to the client CRM or Meta Leads Centre.	Required now
Setup: Lead Centre → CRM Connected	**Connect the client's CRM to Facebook Lead Centre.** This can be done as an automatic integration by us, or the client can do it themselves. Leads must flow to the CRM in real time.	Required now
Meta Ads App Installed	**Client downloads the Meta Ads Manager app** on their phone so they get instant push notifications when a lead comes in. Walk them through this during onboarding.	Required now
Setup: Approved Videos Exist	At least 5 approved recorded videos exist before campaign build starts.	Required now

Important: The Lead Centre → CRM connection and Meta Ads App steps are critical. Without them, the client will miss leads in real time. If the client cannot connect their CRM, offer to do it for them via the Lead Centre automatic integration. Always confirm a test lead flows through before going live.

Audience Setup — Build Each in Meta Ads Manager

Audience Name	Description
VV | 25% | 365D	Video viewers who watched 25% — 1 year window
VV | 50% | 180D	Video viewers who watched 50% — 6 month window
VV | 75% | 90D	Video viewers who watched 75% — 90 day window
VV | 95% | 30D	Video viewers who watched 95% — 30 day window
ENG | FB Page | 365D	Facebook Page engagers — 1 year
ENG | IG Account | 365D	Instagram account engagers — 1 year
ENG | Messaging | 365D	People who sent a DM — 1 year
LEAD | Form Open No Submit | 30D	Opened lead form but didn't submit — 30 days
LEAD | Form Submitted | 180D	Submitted lead form — 6 months (use as EXCLUSION)

When ALL onboarding checkboxes are done, check the **Onboarding Complete** field. This signals to Andrew the client is ready for Monday launch.

Part 4: Campaign Build Playbook

This is the 3-campaign stack. Campaign 1 distributes educational videos to build warm audiences. Campaign 2 retargets warm viewers with stronger messaging. Campaign 3 runs lead ads with Instant Forms to the hottest warm audiences.

Before you build anything: Andrew must confirm which videos to run. You need the correct ad account, Facebook Page, and Instagram confirmed. If any of these are missing — task goes BLOCKED. Do not proceed.

Campaign 1: TOF | EDU VIDEO (Video Views / ThruPlay)

Purpose: Build warm audiences from educational video consumption. Campaign 1 does NOT send traffic to the seller website.

1. Open Meta Ads Manager in the correct client ad account.
2. Click **Create**.
3. Choose objective: **Video Views / ThruPlay**.
4. Set **Special Ad Category = Housing**. (This is mandatory for all real estate ads.)
5. Name the campaign: **TOF | EDU VIDEO | [MARKET]** (Example: TOF | EDU VIDEO | PHOENIX)
6. Turn **Campaign Budget Optimization / Advantage+ campaign budget OFF**.
7. Create **one ad set per approved video**.
8. Set each ad set budget to **$10/day** (unless Andrew specifies otherwise).
9. Set geography to the **client's approved market**.
10. Placements: **Facebook Feed, Instagram Feed, Facebook Reels, Instagram Reels, Facebook Video Feeds** only. No Audience Network, no Messenger.
11. Name each ad set: **W[WEEK#] | [BUCKET] | [TOPIC] | [SCRIPT KEY]** (Example: W1 | How-To | Foreclosure | DSREI-07)
12. Create **one ad inside each ad set**.
13. Upload the **correct approved video** (verify Script Key matches).
14. Set the correct **Facebook Page and Instagram identity**.
15. Primary text: **light and natural** — no hard sell.
16. CTA: **"Comment OPTIONS below"** or **"DM OPTIONS"**.
17. Run the **QA checklist** in the SmartSuite Campaign record (see Part 5).

18. Get Andrew's approval, then **Publish**.

Campaign 2: MOF | RETARGET

Purpose: Retarget warm viewers and engagers with stronger, more direct proof/options messaging.

Ad sets to build:

Ad Set Name	Audience
VV75-95 | 30-60D	75% + 95% video viewers
ENGAGERS | 30-90D	Facebook Page engagers + Instagram engagers + message engagers
FORM OPENERS | 30D	Only when form-open audiences exist (later)

1. Open Meta Ads Manager and click **Create**.
2. Choose objective: **Reach or Engagement**.
3. Name the campaign: **MOF | RETARGET | [MARKET]**.
4. Set **Special Ad Category = Housing**.
5. Build the **hot-viewer ad set** (VV75-95 | 30-60D).
6. Build the **engagers ad set** (ENGAGERS | 30-90D).
7. Build the **form-openers ad set** ONLY if that audience exists.
8. **Exclude LEAD | Form Submitted | 180D** from ALL ad sets.
9. Creative: **more direct than Campaign 1** — use proof, urgency, options framing.
10. Name each ad: **[Pain Angle] | Retarget | V1**.
11. Run QA, get approval, **Publish**.

Campaign 3: BOF | LEADS (Lead Generation)

Purpose: Capture leads from the hottest warm audiences using Instant Forms.

Lead form fields:

- Full name
- Phone
- Email

- Property address
- Timeline to sell
- Situation dropdown

1. Open Meta Ads Manager and click **Create**.
2. Choose objective: **Leads**.
3. Conversion location: **Instant Form**.
4. Name the campaign: **BOF | LEADS | [MARKET]**.
5. Set **Special Ad Category = Housing**.
6. Build only **hot warm audiences**: VV95 | 30D, VV75 | 90D, Form Open No Submit | 30D.
7. **Exclude Form Submitted** from all ad sets.
8. Create the **Instant Form** with the fields listed above.
9. Use **Higher Intent form type** if lead quality needs tightening.
10. Name each ad: **[Pain Angle] | Lead Ad | V1**.
11. Run QA, get approval, **Publish**.
12. **CRITICAL: Submit a test lead** and confirm it reaches the client's CRM or Meta Leads Centre. If it does not arrive — task goes BLOCKED immediately.
13. Confirm the client receives the **push notification** on the Meta Ads app.

Creating a Campaign Record in SmartSuite

Every campaign you build in Meta gets a matching record in SmartSuite. Create the record **when you start building** — not after.

1. Go to **Campaigns app** → click **+ New Record**.
2. Campaign Name: use the **exact campaign name from Meta**.
3. Link to the correct **Client** record.
4. Link to the approved **Creative Asset** record.
5. Set **Funnel Stage**: TOF, MOF, or BOF.
6. Set **Campaign Type**: EDU VIDEO, RETARGET, or LEADS.
7. Set **Week**, **Market**, **Daily Budget**, **Owner**.
8. Status: set to **Draft** while building.
9. Work through the **QA checklist** (Part 5).
10. When all 9 QA boxes are checked → change Status to **QA Ready**.

11. Message Andrew for final approval.
12. When Andrew confirms → change Status to **Live** and enter the **Platform Campaign ID** from Meta.

Part 5: QA Checklist

After building a campaign in Meta but **BEFORE publishing**, check every item below in the SmartSuite Campaign record. All 9 boxes must be checked before the campaign is published. If any box cannot be checked — do not publish. Change task to Blocked.

#	Checkpoint	What to Verify
1	QA: Correct Video Uploaded	The video matches what Andrew approved (verify Script Key).
2	QA: Correct Page + IG Identity	The correct Facebook Page and Instagram account are set.
3	QA: Correct Geo/Market	Geography matches the client's approved market.
4	QA: Correct Budget Set	$10/day per ad set (or Andrew's specified amount).
5	QA: Naming Convention Matches	Campaign, ad set, and ad names follow the exact naming formula.
6	QA: Special Ad Category = Housing	Housing category is SET. (This is mandatory for all real estate ads.)
7	QA: Placements Correct	Facebook Feed, Instagram Feed, FB Reels, IG Reels, FB Video Feeds only. No Audience Network, no Messenger.
8	QA: CBO is OFF	Campaign Budget Optimization / Advantage+ is turned OFF.
9	QA: CTA Correct	"Comment OPTIONS" or "DM OPTIONS" — no hard sell CTA.

Automation note: The automation (N9) will post this checklist to #team-tasks every 12 hours for any campaign in QA Ready status that still has unchecked boxes. Use it as your reminder.

Part 6: Weekly Operating Rhythm

The entire system runs on a weekly cycle. Here is exactly what happens each day:

Day	What Happens
Monday	**Start of week.** Open Tasks app → My Queue view. 4 skeleton tasks auto-created by automation (N5) at 6am. Confirm approved videos are ready. Build and launch all approved TOF campaigns. Name each campaign using the correct naming convention.
Tue – Wed	Monitor live campaigns. Complete any open tasks from your queue. Flag blockers immediately — do not sit on them. Process any tasks from Andrew's Friday decisions (retarget builds, archive tasks, etc).
Thursday	**Metrics day.** Windsor AI auto-syncs metrics every 12h (N7). Open Campaigns → Action Required view. Verify auto-pulled metrics are correct. Pull any missing numbers manually. Enter: Spend, ThruPlays, Cost/ThruPlay, 50/75/95% Views, Saves, Comments, DMs, Leads, Cost/Lead. Update Last Pull Date. Create Review records if needed.
Friday	**Andrew's decision day.** Your job: make sure ALL metric fields are filled before Friday morning. Andrew reviews and decides: Keep Running, Cut, Retarget Test, Lead Ad Candidate. The Decision Router automation (N2) executes these decisions automatically.
Weekend	Nothing unless Andrew creates an urgent task.

Your Daily Start Routine

1. Open SmartSuite → **Tasks app** → **My Queue** view.
2. Check **Slack #team-tasks** for any overnight automation alerts.
3. Work your task queue **top to bottom by priority then due date**.
4. If a task is blocked — change status to **Blocked**, fill in the **Blocker Reason**, and message Andrew.
5. Mark tasks **Done** as you complete them (the automation confirms this to Andrew automatically).

Critical: Thursday is non-negotiable. If metrics are not pulled by Thursday EOD, Andrew cannot make Friday decisions. If you cannot access the ad account — task goes BLOCKED immediately. Do not wait.

Part 7: The Decision Framework

Andrew makes decisions in the Reviews app every Friday. The Decision Router automation (N2) executes these. Here is what each decision means and what happens next:

Decision	What It Means	What Happens Next
Keep Running	Campaign is performing — leave it live.	No action needed. Pull metrics again next Thursday. Next review auto-set to 3 days out.
Cut	Campaign is not performing — stop it.	Automation marks campaign as Cut. Creates an archive task for you. Pause the campaign in Meta.
Retarget Test	Video has strong signal — build MOF retarget version.	Automation creates a new MOF campaign draft + Build task in your queue. Build Campaign 2 using this asset.
Lead Ad Candidate	Video is strong enough for direct lead generation.	Automation creates a new BOF campaign draft + Build task. Build Campaign 3 using this asset.

What to Look For in a Review

Check	What to Look At
Attention Quality	ThruPlay volume, Cost/ThruPlay, 50/75/95% view depth. Are people actually watching?
Response Quality	Saves, shares, comments, DMs. Are people engaging beyond just watching?
Pain-Angle Clarity	Is the reason the video worked obvious and strategically useful for retargeting?
Audience Build Value	Is this video building a warm audience worth retargeting?

CPL Scale Signal

When a Live campaign hits **3+ leads at under $75 CPL**, the CPL Threshold Alert (N8) DMs Andrew with a scale signal. This means the campaign is ready for budget increase or BOF expansion. This is Andrew's decision — you do not scale without his instruction.

Part 8: Communication Rules

Everything goes through Slack. Here is how to handle every situation:

Situation	What To Do
Task is blocked	Change status to **Blocked** in SmartSuite (Andrew gets auto-notification via N6). Message Andrew directly if urgent.
Campaign is live	Change Campaign status to **Live** in SmartSuite. Andrew gets auto-notification.
Need video approval	Message Andrew: which Script Key, which client, and a brief note.
Cannot access ad account	Task → Blocked. Message Andrew: "Cannot access [client] ad account. Access needed to proceed."
Campaign build finished	Update Campaign status to **QA Ready**. Message Andrew: "Campaign [name] is QA ready for review."
Leads not arriving	Task → Blocked. Message Andrew immediately: "Test lead for [client] did not arrive. Holding launch."
Client sends new video	Create Creative Asset record. Set Approval Status = Pending. Notify Andrew the asset is uploaded.

What You Do NOT Do

Do not choose which videos to run — Andrew chooses. Do not publish without Andrew's approval. Do not change a budget without Andrew's instruction. Do not create new scripts or rewrite existing ones. Do not access the Finance app. Do not make MOF/BOF decisions without a task from Andrew's review. Do not sit on a blocker — flag it immediately.

Part 9: Quick Reference

Naming Conventions

What	Format
TOF Campaign	TOF | EDU VIDEO | [MARKET]
MOF Campaign	MOF | RETARGET | [MARKET]
BOF Campaign	BOF | LEADS | [MARKET]
Ad Set (TOF)	W[#] | [BUCKET] | [TOPIC] | [SCRIPT KEY]
Ad (TOF)	DSREI-[##] | V[#]
Ad (MOF)	[Pain Angle] | Retarget | V1
Ad (BOF)	[Pain Angle] | Lead Ad | V1
Creative Asset	DSREI-[##] | [Topic/Scenario] | V[#]

Examples:

- Campaign: **TOF | EDU VIDEO | PHOENIX**
- Ad Set: **W1 | How-To | Foreclosure | DSREI-07**
- Ad: **DSREI-07 | V1**
- Creative Asset: **DSREI-07 | Foreclosure | V1**

Creative Rules

- Record on a phone. Vertical 9:16.
- 30–60 seconds. Talking-head format.
- One script per file.
- Delivery: calm, trustworthy, conversational.

Exact CTA: "If you find yourself in this situation and need some advice, just comment 'OPTIONS' below — I'm happy to talk it through with you and explore what options are available to you."

The 5 Script Buckets

Bucket	Content Type

Mistakes	Common mistakes sellers make in this situation.
How-To	Step-by-step guidance for the seller.
Breakdown	Analysis of why a situation is more complex than it looks.
Myths	Challenging assumptions sellers have.
Proof	Testimonials or case study style content.

Campaign Statuses

Status	Meaning
Draft	Being built. Not live yet.
QA Ready	Built, QA checklist in progress.
Live	Published and running in Meta.
Paused	Temporarily stopped.
Cut	Stopped permanently based on Andrew's decision.
Completed	Finished its run.

Task Statuses

Status	Meaning
To Do	Not started. Pick this up.
In Progress	You are working on it right now.
Blocked	You cannot proceed. Change status, fill Blocker Reason, notify Andrew.
Done	Completed. Check the box.

Client Statuses

Status	Meaning
Prospect	Not a client yet.
Onboarding	Signed — setting them up.
Active	Live campaigns running.
Paused	Campaigns paused — waiting on something.
Churned	No longer a client.

Metrics to Pull Every Thursday

SmartSuite Field	Where to Find in Meta
Spend	Amount spent column
ThruPlays	Video views with 15-sec completion
Cost / ThruPlay	Spend ÷ ThruPlays (calculate if not shown)
50% Views	Video watches at 50%
75% Views	Video watches at 75%
95% Views	Video watches at 95%
Saves	Post saves (from Post Engagement breakdown)
Comments	Post comments
DMs	Messaging conversations started
Leads	Leads column (BOF campaigns only)
Cost / Lead	Cost per lead (BOF campaigns only)

Questions? Message Andrew on Slack. When in doubt — ask. When blocked — say so immediately. Never sit on a problem.
