SOP 01

Pipeline

Track every prospect from first conversation to paid client. Win the deal, the system handles the rest.

WHO THIS IS FOR	LAST UPDATED
Andrew (primary). VAs do not touch this app.	May 2, 2026

TL;DR — In 30 Seconds

The big idea

Pipeline is the deal tracker — one record per prospect, not per client. SmartSuite Pipeline is the source of truth for deal state. Close CRM is dialer-only (calls + outcomes flow back via the Conversation Tracker).

When a deal hits Won, n8n auto-creates the Client record + Onboarding record + Drive folder + Slack channel. You don't do that work manually.

SmartSuite is the source of truth

Close Pipeline was retired April 19, 2026. Don't create Opportunities in Close anymore. Every deal lives here.

What This App Is For

The Pipeline tracks every prospect moving toward becoming a paid client. A record is a deal, not a client. Once a deal hits Won, the system creates the client record and kicks off onboarding automatically.

Pipeline Stages — All 11

NDM (No Decision Made) was added April 22, 2026. The full stage list:

Stage	What it means
Conversation – Positive	Had a good first conversation. They're interested.
Follow Up / Reschedule	Need to follow up or rebook a cancelled / missed call.
Booked	Discovery call is scheduled. Set automatically by Calendly when the prospect books.

Stage	What it means
No Show	They didn't show up. M4 No-Show Bridge fires automatically — Calendly Workflow sends a reschedule SMS + email.
Cancelled	They cancelled. Decide: follow up or move to Lost.
NDM (No Decision Made)	Had the conversation, no clear yes or no, no obvious next step. Holding pattern.
Proposal – Decision Pending	Proposal has been sent. Waiting on their yes/no.
Ghosted	They've gone silent after a conversation.
Signed – Invoice Sent	Deal is signed. Invoice is out. Waiting on payment.
Won	Payment received. Triggers automatic Client + Onboarding creation. Drive folder + Slack notification follow.
Lost	Dead deal. Archive it — but always fill in Close Reason.

How a Deal Flows Through the System

The booking flow (auto)

1. Prospect books a Calendly slot → n8n M3 webhook fires.
2. M3 looks up the prospect in Close CRM by email → writes Close Lead ID + company + phone + title back to the Pipeline record.
3. Pipeline record's deal_stage is set to Booked.
4. You walk into the call with full Close context already attached.

The Won flow (auto, M5 — live since Apr 24)

1. You set deal_stage = Won.
2. Won workflow fires within seconds (SS Automation → n8n webhook).
3. Creates the Client record in Clients app.
4. Creates the Onboarding record in Onboarding app, linked to the Client.
5. Creates the Drive folder and Slack channels for that client.
6. Posts a confirmation in #team-operations.
7. Niche-aware video brief is delivered automatically based on Client.Niche.

How to Add a New Deal

1. Open Pipeline → Active Deals view.
2. Click + Add Record.
3. Fill in:
   - **Deal Name** — format: [Company Name] — [Month Year]. Example: "Apex Homes — Apr 2026".
   - **Company Name** — their business name.
   - **Contact Name** — the person you spoke to.
   - **Contact Email** + **Contact Phone**
   - **Stage** — current stage in the pipeline.
   - **Deal Value** — estimated total (setup + 3 months retainer minimum).
   - **Next Action + Next Action Date** — always fill BOTH. This is how you remember to follow up.
4. Add notes from the conversation in Notes.
5. Save.

How to Move a Deal to Won

6. Open the deal record.
7. Change Stage to Won.
8. Fill in Close Reason if relevant (e.g., "Setup $3K + $2K/mo retainer").

9. Save. Within seconds, the system creates the Client + Onboarding + Drive folder + Slack channels.
10. You'll get a confirmation in #team-operations.

> **Do not manually create a Client record**
>
> The M5 Deal Won workflow does this automatically. If you create one manually, you'll end up with a duplicate. If the auto-creation fails, log the issue and Andrew will rebuild it manually.

How to Move a Deal to Lost

11. Open the deal record.
12. Change Stage to Lost.
13. Always fill in Close Reason. This is how you spot patterns over time. (e.g., "Price objection", "Not enough ad budget", "Went with another agency".)
14. The record stays in the Won/Lost view for reference.

Key Fields Explained

Field	What to put here
Deal Value	Best estimate of total contract value. Setup fee + first 3 months retainer.
Health Status	On Track / At Risk / Stalled. Be honest. At Risk = they've gone quiet or pushed back on price.
Probability %	Your gut feeling on close likelihood. 0–100%.
Next Action + Next Action Date	Your follow-up system. Always fill both — undated actions don't surface.
ICP Score	How well this prospect fits the ideal client profile. 1–10. High budget, motivated, has videos = 9–10.
Close Lead ID	Auto-populated by the M3 Calendly→Close lookup workflow. Don't edit.
Stage (deal_stage)	See the 11-stage table. Setting this is what drives the rest of the system.

Views

View	When to use it
Active Deals	Daily dashboard. All deals not yet Won or Lost. Sorted by Next Action Date.
Won/Lost	Reference view. Spot patterns in what's closing and what's dying.

What NOT to Do

- ✗ Don't create a Client record manually. Win the deal → the system does it.
- ✗ Don't leave Next Action Date blank. Undated = invisible.
- ✗ Don't leave deals in Ghosted forever. Either move to Lost or schedule a final follow-up.
- ✗ Don't delete deal records. Move to Lost instead.
- ✗ Don't create Opportunities in Close CRM. Close is dialer-only since April 19, 2026.

Troubleshooting — If Something Looks Wrong

Problem	What to do
Marked Won but no Client record appeared	Check #team-operations for an error notification. Tell Andrew — M5 may have failed.

Problem	What to do
Calendly booking didn't create a Pipeline record	M3 webhook may have failed. Check n8n. Tell Andrew.
Close Lead ID is blank on a booked deal	M3 Close lookup didn't find a match (email mismatch in Close). Andrew will reconcile.
A deal is missing from Active Deals	Check if Stage was accidentally set to Won or Lost.

Cheat Sheet

Daily routine

1. Open Active Deals view, sort by Next Action Date.
2. Work the top of the list — actions due today.
3. Before any call, scan the Pipeline record for Close Lead ID + history.
4. After every call: update Stage, Next Action, Next Action Date.
5. Win → set Stage to Won. The system takes it from there.
