SOP 02

Conversation Tracker

Log every prospect interaction so daily activity is visible and Close CRM stays in sync.

WHO THIS IS FOR	LAST UPDATED
Andrew (primary). VAs do not touch this app.	May 2, 2026

TL;DR — In 30 Seconds

The big idea

Every conversation = one record. This is the activity log, not the deal tracker — that's Pipeline (SOP 01).

A polling workflow pulls call activity from Close CRM during business hours and creates records here automatically. You can also add records manually for things Close doesn't see (cold DMs, FB messages, etc.).

What This App Is For

Every prospect conversation Andrew has — cold DM reply, discovery call, follow-up, anything — gets logged here with its outcome. This is the daily activity tracker. It also stays in sync with Close CRM via n8n.

This is NOT where you track deals

That's the Pipeline app. This app tracks one record per interaction. The Pipeline app tracks one record per deal.

How to Log a Conversation

1. Open Conversation Tracker.
2. Click + Add Record.
3. Fill in:
   - **Company** — the company name of the person you spoke to.
   - **Decision Maker** — the name of the person you spoke to.
   - **Date** — today's date (or when the conversation happened).
   - **Outcome** — Interested / Maybe / Not Interested.
   - **Call Booked** — Yes if a discovery call was booked from this conversation. Otherwise No.
   - **Notes** — 1–3 sentences on what was said, objections, context for next follow-up.

4. Title auto-generates as "Company — Outcome". Don't edit.
5. Close Activity ID is auto-populated by the n8n sync. Don't edit.

Outcome vs. Call Booked — They're Different

Two separate fields because a conversation can be Interested without a call being booked yet (e.g., they're positive but checking their calendar). And a call can be booked from a Maybe.

- Outcome = their level of interest.
- Call Booked = did a meeting actually get scheduled as a result?

Always fill in both.

The Close → SmartSuite Sync

Close CRM activity is pulled into this app automatically by an n8n polling workflow.

Property	Value
Workflow ID	15VLgXsxSNGbJIdp
Schedule	8am – 3:30pm ET, Monday – Friday (timezone: America/New_York)
What it does	Polls Close CRM for call outcomes and creates / updates matching records here.
Dedup key	Close Activity ID — prevents duplicate records.
History	Replaced the old M2 webhook on April 22, 2026 (webhook had a custom.prefix bug that silently dropped events). Polling is the current production path.

What this means in practice

- Calls you log in Close CRM during the day will appear in Conversation Tracker by the next polling run (within ~2 hours).
- You can add records manually here for anything Close doesn't track (cold DMs, FB messages, etc.) — the dedup key prevents collisions.
- Outside the polling window (after 3:30pm ET), records won't arrive until the next morning.

Key Fields Explained

Field	What it means
Outcome	Interested / Maybe / Not Interested.
Call Booked	Yes/No. Was a discovery call booked from this conversation?
Close Activity ID	The ID from Close CRM. Sync key — never edit manually.
Notes	What happened. Keep it short and useful.

Views

View	When to use it
Active	Main view. Recent conversations sorted by date.

What NOT to Do

- ✗ Don't edit Close Activity ID. Touching it causes duplicate records.
- ✗ Don't leave Outcome blank. Every record needs one.
- ✗ Don't use this to track deals. That's the Pipeline app.
- ✗ Don't delete records. If a duplicate appears, flag to Andrew.

Troubleshooting — If Something Looks Wrong

Problem	What to do
Duplicate records appearing	Check if Close Activity ID matches on both. Tell Andrew — dedup logic may have failed.
Records not appearing from Close CRM	Polling workflow may have failed. Check #team-operations on Slack for errors.
Records arriving after 3:30pm ET	Won't — they'll arrive next business morning. Polling only runs 8am–3:30pm ET M–F.
