RequityAI · Agency OS

SOP 03

Clients

The master directory of every client — who they are, their account details, and current status.

WHO THIS IS FOR
Andrew (manages). VA (read-only reference for account IDs and links).

LAST UPDATED
May 2, 2026

TL;DR — In 30 Seconds

The big idea

Clients is the source of truth for who a client is — contact details, Meta account IDs, status, links to everywhere they live in the system.

You don't track onboarding here (Onboarding app). You don't build campaigns here (Campaigns app). You don't manage tasks here (Tasks app). This is just the directory.

Records are auto-created

When a deal hits Won in Pipeline, the M5 Deal Won workflow (live since April 24, 2026) creates the Client record + Onboarding record + Drive folder + Slack channels automatically. Don't create them manually.

Client Status — What Each Means

Status	What it means
Onboarding	Client is new. Onboarding steps in progress. Campaigns not yet live.
Active	Campaigns are live. Client is in the monthly retainer phase.
Paused	Campaigns paused (client travelling, budget pause).
Churned	Client has left. Keep the record — don't delete.

How a Client Record Gets Created

The Won flow (M5 — auto)

1. Andrew sets Pipeline deal_stage = Won.

2. M5 webhook fires within seconds.
3. Client record created here with basic info pulled from the deal.
4. Onboarding record created in Onboarding app, linked to this Client.
5. Drive folder created under RequityAI / [Client Name].
6. Slack channels (#team-[client] private, #client-[client] public) created.
7. Niche-aware video brief delivered based on Client.Niche field.
8. Confirmation posted in #team-operations.

Andrew then fills in the account-specific fields (Meta IDs, Facebook page URL, etc.) as the client completes their setup. The VA reads these fields when they need to build campaigns or request access.

How VAs Use This App (Read-Only)

VAs reference client records to find account IDs and links. The workflow:

1. Open Clients app → Dashboard view.
2. Find the client (search by business name or scroll).
3. Open the record. Read-only — find what you need:
   - **Ad Account ID** → for building campaigns in Ads Manager.
   - **Facebook Page URL** → to confirm the correct page.
   - **Business Portfolio ID** → for access requests.
   - **Drive Folder URL** → to find scripts and creative assets.

> **VAs: do not edit fields here**
>
> Unless Andrew specifically tells you to. Particularly: never change Status, Slack Channel ID, or any of the account ID fields. If something looks wrong, flag it.

How Andrew Updates a Client Record

4. Open the client record.
5. Update the relevant field as the client completes their setup (e.g., Ad Account ID).
6. If their phase changes (Onboarding → Active), update Status.
7. Add important context to Notes.

Key Fields Explained

Field	What it's for
Business Name	Primary identifier. Use their actual business name.
Status	Onboarding / Active / Paused / Churned. Always keep current.
Niche	REI (real estate investor wholesaler) / Notes (notes business) / Other. Drives niche-aware video brief delivery (M5). Ritsel Notes is Notes, not REI.
Market / Region	Geographic target market (e.g., "Phoenix, AZ", "Dallas-Fort Worth").
Ad Account ID	Facebook Ad Account ID. Find in Meta Business Manager. Numbers only.
Business Portfolio ID	Meta Business Portfolio ID. Needed for VA to request access.
Facebook Page URL	Full URL to their Facebook business page.
Drive Folder URL	Link to their Google Drive folder with scripts and creative assets.

Field	What it's for
Slack Channel ID	Used by n8n to route notifications to the right Slack channel. Andrew sets this.
Assigned VA	Which VA handles this client's campaigns.
Link to Onboarding	Connects to the Onboarding app record. Auto-created by M5.
Link to Campaigns	Connects to all Campaign records for this client.
Live Campaigns	Auto-counted from linked campaigns. Shows how many are running.
Open Tasks	Auto-counted from linked tasks. Shows pending VA work.

Views

View	When to use it
Dashboard	Main view. All clients with status, live campaigns, open tasks at a glance.
Client Onboarding Form	The form new clients fill out. Don't edit this view.

What NOT to Do

- ✗ Don't create client records manually. Win the deal in Pipeline → M5 creates the record.
- ✗ Don't delete client records. Even churned clients stay as historical data.
- ✗ Don't edit Slack Channel ID unless Andrew has given you the correct ID.
- ✗ VAs: don't change the Status field. Only Andrew manages status.
- ✗ Don't store video scripts or creative assets in this app. Those go in Google Drive — link via Drive Folder URL.

Troubleshooting — If Something Looks Wrong

Problem	What to do
Client record wasn't created after a deal was Won	Check #team-operations for an error. M5 may have failed — Andrew will reconcile.
Ad Account ID is blank	Client hasn't shared it yet. Check Onboarding app for the step status.
Client shows wrong status	Flag to Andrew — only Andrew changes Status.
Drive Folder URL is empty	Drive folder hasn't been created yet (BegEckXSgXmVffX2 runs daily 8am ET). Check with Andrew if it's been more than a day.
Niche is wrong	Ritsel = Notes, not REI. Wrong niche = wrong video brief delivered. Tell Andrew to fix.
