SOP 05

Campaigns

Build, QA, and launch every Facebook ad campaign without breaking the reporting system.

WHO THIS IS FOR	LAST UPDATED
Virtual Assistant — campaign builds and QA.	May 2, 2026

TL;DR — In 30 Seconds

The big idea

Each Campaigns record = one Facebook campaign. You build it in Ads Manager and mirror the setup in the SmartSuite record. Windsor AI pulls metrics in automatically.

Every client runs 3 campaign types stacked: Video Views (cold) → Retarget (warm, auto-built audiences) → Lead Ad (hot, captures leads via FB Lead Form).

Three things that will break the system if you get them wrong

1. Special Ad Category = Housing must be selected. Skipping = legal risk + ad account ban.
2. Naming convention must match exactly — reporting + Windsor sync depend on it.
3. All 9 QA checks must pass before publishing. No shortcuts.

Why No Pixel

All lead capture uses native Facebook Lead Forms — prospects never leave the platform. Retargeting audiences are built from in-platform engagement (video view percentages), not pixel events. So you never have to install or debug a pixel.

The 3 Campaign Types

Type	Audience	Goal
Video Views	Cold — broad audience, no prior interaction	Get videos in front of distressed sellers. Build the retargeting pool.
Retarget	Warm — people who watched 25%+ of a Video Views ad	Different talking-head video, same "comment OPTIONS" CTA. Push viewers toward 75%+ for the Lead Ad.

Type	Audience	Goal
Lead Ad	Hot — people who watched 75%+ or engaged with content	Capture contact details via Facebook Lead Form. The ONLY campaign that collects leads.

Audiences auto-build

Retarget and Lead Ad audiences are built automatically from Video Views activity by the Campaign Intelligence Agent. They are NOT created manually during onboarding. If they don't exist yet, the Video Views campaign hasn't run long enough — flag to Andrew, do not proceed.

Naming Convention — Get This Exactly Right

This is what goes into Ads Manager AND the SmartSuite record. The reporting system parses these names. One typo = broken metrics.

Layer	Format	Example
Campaign	[CAMPAIGN TYPE] | [MARKET]	VIDEO VIEWS | PHOENIX AZ
Ad Set	[CLIENT CODE] | [AUDIENCE] | [DATE]	APEX | 25PCT-VIEWERS | APR2026
Ad	[SCRIPT ID] | [SITUATION] | [VERSION]	FC-B2-14 | FORECLOSURE | V1

Campaign Status Field — What Each Means

Status	What it means
Draft	Campaign record created but not yet built in Ads Manager.
QA Ready	Campaign is built in Ads Manager and ready for the QA checklist.
Live	Campaign passed QA and is running. Metrics tracking.
Paused	Temporarily paused — budget, review, or client request.
Cut	Killed — underperforming. Keep the record for reference.
Completed	Ran its course and ended naturally.

How to Build a Campaign — Step by Step

You'll get a Task in the Tasks app telling you to build a campaign. Here's the exact sequence:

Step 1 — Open the Campaign Record

1. Go to Campaigns app → Build Queue view.
2. Find the campaign assigned to you (Status = Draft).
3. Open the record.

Step 2 — Confirm the Setup Info

Check these fields are filled in BEFORE you touch Ads Manager:

- Client — correct client is linked
- Market — geographic market is listed
- Campaign Type — Video Views / Retarget / Lead Ad
- Daily Budget — dollar amount is set
- Script Link — Google Drive link to the video script
- Asset Link — Google Drive link to the video file
- Week — which week of the quarter (W1–W13)

> **Anything blank?**
>
> Do not start building. Add a note to the Task record and tell Andrew what's missing.

Step 3 — Get the Video

4. Click the Asset Link to open Google Drive.
5. Download the video file.
6. Confirm it matches the Script Link / script ID.

Step 4 — Build in Ads Manager

7. Find the client's Ad Account ID in the Clients app (Ad Acct ID field). Log into their Facebook Ads Manager via their Business Portfolio.
8. Create the campaign using the naming convention above.
9. Set the campaign objective:
    - **Video Views** → Video Views objective
    - **Retarget** → Engagement objective
    - **Lead Ad** → Leads objective (uses Facebook Lead Form)
10. Set the audience:
    - **Video Views** → broad audience (state or major metro, no custom audiences)
    - **Retarget** → use the 25% / 50% video viewer custom audiences (auto-built — confirm they exist before proceeding)

   - **Lead Ad** → use the 75% / 95% video viewer custom audiences (also auto-built from Video Views activity)
11. Set the budget to match the Daily Budget field.
12. Upload the video.
13. Set the CTA based on campaign type:
   - **Video Views** → **No CTA button.** Ad copy tells viewers to comment "OPTIONS" — drives engagement, builds the retargeting pool.
   - **Retarget** → **No CTA button.** Same approach. Different video, same "comment OPTIONS" CTA.
   - **Lead Ad** → **Facebook Lead Form attached.** This is the only campaign that captures contact details.

> **Required by law — never skip**
>
> Set Special Ad Category = Housing. Without it, the ad account can be banned.

14. Do NOT use zip code targeting. City/state level only — Facebook Housing rules.
15. Turn CBO (Campaign Budget Optimisation) OFF.
16. Save as draft in Ads Manager. Do NOT publish yet — QA first.

Step 5 — Fill in the Campaign Record

Back in SmartSuite, update the campaign record:

- Campaign Name → paste the exact campaign name from Ads Manager
- Ad Set Name → paste the exact ad set name
- Ad Name → paste the exact ad name
- Platform Campaign ID → the Facebook Campaign ID (in Ads Manager URL or settings)
- Owner → set to your name (VA / Operator)
- Status → change from Draft to QA Ready

Step 6 — Complete the QA Checklist

Tick each QA field in the record. Only tick Yes when you have personally confirmed it.

QA Check	How to confirm
Correct Video Uploaded	Play the video in the ad preview. Compare to the Asset Link.
Correct Page & IG Identity	Check the "Identity" section in Ads Manager — correct FB page and IG account selected.
Correct Geo / Market	Check the location targeting matches the client's market.
Correct Budget Set	Daily budget matches the SmartSuite Campaign record.
Naming Convention Matches	Campaign / Ad Set / Ad names exactly match the naming convention.
Special Ad Category = Housing	Open campaign settings. Confirm "Housing" is selected.
Placements Correct	Usually Facebook + Instagram feeds + Reels.
CBO Off	Confirm Campaign Budget Optimisation is toggled OFF.
CTA Correct	Video Views + Retarget: no CTA button, ad copy says "comment OPTIONS". Lead Ad: Facebook Lead Form attached and working.

> **All 9 QA checks must be Yes before publishing**
>
> If any is No, fix it first. Do not publish a campaign with a No on the QA checklist.

Step 7 — Publish and Update

17. Once all 9 QA checks are Yes, publish the campaign in Ads Manager.
18. In the SmartSuite record, change Status to Live.
19. Set Launch Date to today's date.
20. Tick Client Launch Notified → Yes (n8n sends the notification, but confirm it happened).
21. Mark your Task in the Tasks app as Done.

How Metrics Work — Automatic

You don't enter metrics. Windsor AI pulls performance data from Facebook every 12 hours and n8n writes it into the campaign record.

Fields populated automatically:

- Spend, ThruPlays, Cost / ThruPlay
- 50% Views, 75% Views, 95% Views
- Saves, Shares, Comments, DMs
- Leads, Cost / Lead
- Last Pull Date — shows when data was last synced

> **Sync watchdog**
>
> If Last Pull Date is more than 48 hours ago, something is wrong with the Windsor sync. Flag to Andrew.

Key Fields Explained

Field	What it's for
Campaign Record Name	The name of this record in SmartSuite. Use the same naming convention as Ads Manager.
Script Link	Google Drive link to the video script used.
Asset Link	Google Drive link to the actual video file used in the ad.
Platform Campaign ID	Facebook Campaign ID. Windsor uses this to pull metrics. Critical — never blank.
Week	Which week of the quarter (W1–W13). Used for reporting.
Saves	The Hormozi metric. High saves = content resonating. Your winner signal.
Owner	Who built / owns this campaign record (VA / Operator).
Launch Date	The date the campaign went live. Set this when you publish.
Campaign Type	Video Views / Retarget / Lead Ad — see table above.

Views You'll Use

View	When to use it
Build Queue	VA default. All Status = Draft. Your work queue.

View	When to use it
QA Ready	Campaigns built and waiting for QA. Work through these before starting new builds.
Live	All running campaigns with metrics visible.
All Campaigns	Andrew's view. Everything across all clients.

What NOT to Do

- ✗ Never skip Special Ad Category = Housing. Legal requirement. Skipping risks an ad account ban.
- ✗ Never use zip code targeting. Facebook's housing rules prohibit it. City/state only.
- ✗ Never publish without all 9 QA checks ticked Yes.
- ✗ Never change the Platform Campaign ID once set. Windsor uses it to pull metrics.
- ✗ Never mark Status = Live unless the campaign is actually published and running.
- ✗ Never leave Asset Link or Script Link blank. If you can't find the file, ask Andrew before building.

Troubleshooting — If Something Looks Wrong

Problem	What to do
Metrics haven't updated in 48+ hours	Check Last Pull Date. Flag to Andrew — Windsor sync may have failed.
Campaign is Live in Ads Manager but Draft in SmartSuite	Update the Status field. Don't let them get out of sync.
Asset Link is broken or goes to the wrong file	STOP. Do not proceed. Tell Andrew — wrong video in the wrong ad is a real problem.
Special Ad Category warning in Ads Manager	Housing wasn't selected. Fix before publishing.
Facebook rejected the ad	Flag to Andrew immediately with the rejection reason.
Retarget / Lead Ad audiences don't exist yet	The Video Views campaign hasn't run long enough to build audiences. Flag to Andrew — do not proceed.

Cheat Sheet

> **Build → Launch in one glance**
>
> 1. Confirm setup info → 2. Get video → 3. Build in Ads Manager (Special Ad Category = Housing!) → 4. Mirror in SmartSuite → 5. All 9 QA checks YES → 6. Publish → 7. Status = Live + Launch Date set → 8. Mark Task as Done.
>
> If anything feels off, stop and ask. A broken campaign is more expensive than a delayed one.
