SOP 07

Optimization

Performance review cycles for live campaigns. n8n flags what to review. Andrew decides what to do.

WHO THIS IS FOR	LAST UPDATED
Andrew only. VAs do not work in this app.	May 2, 2026

TL;DR — In 30 Seconds

The big idea

Every live campaign gets a scheduled review. n8n creates the review record, pulls in the latest Windsor metrics, and flags whether the campaign should be Killed, Scaled, or left running.

You look at the numbers, apply the decision rules, log the call. The campaign record updates accordingly. Full history lives here.

Currently dormant

The 72hr Review Trigger workflow (VTiPgz0Zem8jiOYx) was deactivated April 26, 2026 as part of the campaign-gated cleanup. It reactivates the moment the first real campaign goes live. Until then, no review records will be created automatically.

How the Review Cycle Works

The Trigger

n8n automatically creates a review record in this app when:

- A campaign has been live for 72 hours (first review).
- A campaign has been live for a set number of days after the last review (ongoing reviews).

What n8n Fills In

When a review record is created, n8n pulls the latest metrics from Windsor AI:

- Spend.
- ThruPlays + Cost / ThruPlay.
- Views (50%, 75%, 95%).
- Saves, Shares, Comments, DMs.

- Leads + Cost / Lead.

What Andrew Does

1. Open Optimization → Pending Reviews view.
2. Find the review record (sorted by Review Date).
3. Look at the metrics + n8n recommendation.
4. Apply the decision rules below.
5. Log the decision in the record.
6. The Campaign record in the Campaigns app updates accordingly.

Decision Rules — What to Do With the Numbers

Apply these consistently.

Video Views Campaigns

Metric	Threshold	Action
Cost / ThruPlay	> $0.15	⚠ Review — consider new creative or new audience
Cost / ThruPlay	< $0.05	✓ Scale — increase daily budget by 20%
Saves rate	High relative to other campaigns	**Winner — flag as winning creative. Increase budget.**
ThruPlays < 100 after $50 spend	—	✗ Kill — creative or audience isn't working

Retarget Campaigns

Metric	Threshold	Action
Audience size < 1,000	—	⚠ Hold — retargeting pool too small. Keep Video Views running longer.
Cost / result	High with no engagement	✗ Kill — warm audience isn't converting
DMs or link clicks	Strong	✓ Scale — this is working

Lead Ad Campaigns

Metric	Threshold	Action
Cost / Lead	> $50	✗ Kill or Pause — not efficient
Cost / Lead	< $20	✓ Scale — increase budget. Working.
No leads after $100 spend	—	✗ Kill — offer or audience isn't right

How to Log an Optimization Decision

7. Open the review record.
8. Look at the metrics. Apply the decision rules.
9. Decide: Scale / Hold / Pause / Kill / New Creative.
10. Update the linked Campaign record:
    - **Killing →** Campaign Status = Cut.
    - **Pausing →** Campaign Status = Paused.
    - **Scaling →** Update Daily Budget field. Then update in Ads Manager.
11. Log your decision in Decision Notes — paper trail.
12. Change review record Status to Reviewed.
13. Record moves from Pending Reviews → Decision Log.

Winner Identification

A Winner is a campaign where:

- Saves rate is significantly higher than other campaigns running at the same time.
- ThruPlays are high and Cost / ThruPlay is low.
- The content is resonating — comments like "this is exactly my situation", DMs coming in.

When you identify a winner:

14. Note it in the review record.
15. Flag it in the linked Campaign record (Winner Reviews count field).
16. The winning video should be the base for new ad creative — same topic, different framing or opening hook.

Key Fields Explained

Field	What it's for
Review Date	When this review is due. Work reviews in date order — oldest first.
Next Review Date	When the next review should happen. n8n sets this automatically.
Campaign	Linked campaign record being reviewed.
Decision	Scale / Hold / Pause / Kill / New Creative.
Decision Notes	Why you made this decision. 1–2 sentences is fine.

Views

View	When to use it
Pending Reviews	Andrew's daily check. Campaigns needing a decision today.
Decision Log	Historical record of every optimization decision. Spot patterns.

What NOT to Do

- ✗ VAs do not touch this app. Optimization decisions are Andrew's.
- ✗ Don't skip a review because the campaign looks fine. Even good campaigns need the review logged.
- ✗ Don't kill a campaign without logging the reason. Need the data trail.
- ✗ Don't scale by more than 20% at a time. Facebook's algorithm needs time to adjust.

Troubleshooting — If Something Looks Wrong

Problem	What to do
Metrics look blank or zero	Windsor sync may have failed. Check Last Pull Date in Campaigns app.
No review records appearing for live campaigns	Confirm 72hr Review Trigger (VTiPgz0Zem8jiOYx) is active. It's currently dormant — reactivate when first real campaign goes live.
Review Date column shows "Launch Date"	Known UI quirk — column header needs renaming. Right-click → Rename.
A campaign I killed is still showing as Live in Campaigns app	Manually update Campaign Status to Cut. Then investigate why n8n didn't update.

Cheat Sheet

> **The optimization loop**
>
> 1. Pending Reviews → oldest first. 2. Look at the numbers. 3. Apply the threshold rules. 4. Decide. 5. Update the Campaign record. 6. Log it. Move on.
>
> Patterns in Decision Log are gold — review monthly to spot what's actually working.
