RequityAI · Agency OS

SOP 09

Slack Communication

How to talk to the team, the agents, and SmartSuite — without breaking the automation.

WHO THIS IS FOR	LAST UPDATED
Virtual Assistant — every Slack message you send.	May 2, 2026

TL;DR — In 30 Seconds

The big idea

Slack is wired into SmartSuite. When you post a structured /update message, an agent reads it and updates the right SmartSuite record automatically. No copy-paste, no manual data entry.

Section 7 (Structured Message Format) is the most important part of this SOP. Get the format right and the system does the work for you. Get it wrong and Andrew has to fix it manually.

Channel renamed

#team-tasks was renamed to #team-operations on April 22, 2026. Use #team-operations everywhere.

Channel Map

RequityAI Slack has 4 types of channels. Each has one job. Post in the wrong place and your message gets lost — or worse, goes to the client.

Channel	What it's for	Who posts
#all-requityai	Company-wide announcements, updates, recognition.	Andrew only. VAs read.
#team-operations	Cross-client agency rollup. Daily ops briefing (8am ET), sales brief (8:05am ET M–F), system health summaries, stale-record alerts. Cross-client signal lives here.	Agents + Andrew.
#team-<client>	Internal team channel for ONE client. Per-client task notifications, build notes, video status, QA approvals, day-to-day VA work. ONE channel per client (private).	You + agents + Andrew.

Channel	What it's for	Who posts
#client-<client>	Client-facing channel (if the client is in Slack). Professional tone only. Campaign launch notifications, deliverables.	Andrew (mostly). VA only with approval.

Two channels per client — never mix them up

#team-<client> = INTERNAL. Anything goes (within reason). Build notes, blockers, questions.

#client-<client> = EXTERNAL. Client may be reading. Professional only. Never structured /update messages, never internal opinions, never pricing.

Current Client Channels

Client	Internal	Client-facing
Ritsel Notes	#team-ritsel-notes	#client-ritsel-notes
Quick Home Buyers	#team-quick-home-buyers	#client-quick-home-buyers
RealVantage	#team-real-vantage	#client-real-vantage
First Integrity Home Buyers	#team-first-integrity-home-buyers	#client-first-integrity-home-buyers

When a new client is onboarded, both channels are created automatically. You'll be added to both.

Communication Rules

1. Respond to task notifications within 1 hour during working hours.
2. Use threads for replies. Never reply in the main channel body.
3. Use emoji reactions to acknowledge:
   - ✅ = Done / Acknowledged
   - 👀 = Seen, working on it
   - ❓ = Need clarification
4. Do not DM Andrew unless it's urgent and private. Use the appropriate channel.
5. Do not use @channel or @here. Andrew only.
6. Keep messages short and actionable. State the issue, what you tried, what you need.
7. No personal conversations in work channels.

> **Quiet hours**
>
> Automated client-facing notifications fire 8am–6pm ET only. If you see a system message outside those hours, it's probably a system issue — flag to Andrew.

Escalation — If Something's Broken or Urgent

8. Post in #team-<client> (or #team-operations if cross-client) with the client name and issue.
9. No response within 30 minutes AND blocking a live campaign? DM Andrew directly.
10. System alert that affects a live campaign? DM Andrew immediately.

What NOT to Do

- ✗ Don't create new channels without Andrew's approval.
- ✗ Don't invite external people to any channel without Andrew's approval.
- ✗ Don't discuss client information in #all-requityai.
- ✗ Don't post free-form task updates — always use the structured format (Section 7).
- ✗ Don't use Slack for file storage. All files go to Google Drive.
- ✗ Don't ever post structured /update messages in #client-<client> channels.

Quick Reference Card

What you're doing	Where it goes
Reading agency-wide briefings, system status	#team-operations
Working on a specific client (build, QA, video, blocker)	#team-<client>

What you're doing	Where it goes
Asking a question about a build	#team-<client>
Logging a /update Tasks message	#team-<client>
Logging a /update Pipeline / Finance message	#team-operations
Communicating WITH the client	#client-<client> (Andrew approves first)
Reporting an urgent system failure blocking work	DM Andrew

Structured Message Format — REQUIRED

This is the most important section in this SOP

When you post a /update message, the SmartSuite Sync Agent reads it within 60 seconds and updates the matching record in SmartSuite. ⚠ reaction = parse error, fix and repost.

Get the format right and Andrew never has to touch SmartSuite. Get it wrong and Andrew has to fix it manually — which is exactly the bottleneck this whole system removes.

The Three Agents

Three automation agents speak to you in Slack. Recognising their messages helps you know what action to take.

Agent	What it does	Your job
Campaign Intelligence Agent	Monitors campaign performance. Decides when retargeting audiences should be built. Flags underperforming ads. Posts to #team-<client> and #team-operations.	Execute its specs exactly as given (audience thresholds, lookback windows, page IDs). Don't modify them. Post a /update Tasks back when done.
Operations Agent (Slack Ops Supervisor)	Runs at 8am and 8pm ET (M–F). Checks system health, flags stale tasks, posts daily briefings to #team-operations.	Read the briefing. If it flags something assigned to you, act and post a /update.
SmartSuite Sync Agent	Parses your /update messages and writes them to SmartSuite. Reacts ⚠ (parse error).	Post correctly formatted messages. If you see ⚠, fix and repost.

Heads up

The Campaign Intelligence Agent is currently dormant — it activates the moment a real campaign goes live. Operations Agent and SmartSuite Sync Agent are live and active right now.

When to Use a Structured Message

Use a /update message any time something should be recorded in SmartSuite. That includes:

- Completing a task
- Flagging a task as blocked
- Reporting a campaign build is ready for QA
- Confirming an onboarding step is done

- Flagging a client issue
- Reporting video / creative status
- Logging a conversation outcome
- Responding to a Campaign Intelligence Agent directive
- Acknowledging an Operations Agent reminder

If your message is a question or discussion, you do NOT need the structured format. Only use it when the result should update a SmartSuite record.

The Format

Every structured message starts with /update [APP] on the first line, then field: value pairs on each subsequent line.

Skeleton

/update [APP]

Client: [exact client name from SmartSuite]

Action: [what happened]

Status: [new status value]

Notes: [any additional context]

Rules:

- /update tag and app name MUST be on the first line.
- Client name MUST match SmartSuite exactly. "Quick Home Buyers" — not "QHB" or "quick home".
- Each field on its own line. Don't combine.
- Status values MUST use exact SmartSuite dropdown labels (listed below).
- Notes is optional but encouraged.
- Don't add extra fields. Only use the ones listed for each app.

App-Specific Formats

Tasks

Format

/update Tasks

Client: [client name]

Task: [task name or task type]

Status: [To Do | In Progress | Blocked | Done]

Notes: [what you did or why it's blocked]

Valid Status: To Do, In Progress, Blocked, Done.

Valid Task Types (15): Set Up Ad Account Access, Set Up Lead Forms, Request Videos, Upload Creative, Write Script, Admin, Build Campaign (CSV Import), Build Campaign (Manual), QA Campaign, Launch Campaign, Campaign Review, Cut / Pause Campaign, Create Retargeting Audiences, Update SmartSuite Records, Escalation Follow-Up.

Example — task completed

/update Tasks

Client: RealVantage

Task: Build Video Views Campaign

Status: Done

Notes: 3 ad sets live, 5 ads per set, all videos from batch 2

Example — task blocked

/update Tasks

Client: First Integrity Home Buyers

Task: Create Retargeting Audiences

Status: Blocked

Notes: Ad account access not yet confirmed — waiting on client

Campaigns

Format

/update Campaigns

Client: [client name]

Campaign: [campaign name]

Action: [Build Complete | QA Ready | Launched | Paused | Issue]

Notes: [details]

Example — ready for QA

/update Campaigns

Client: Quick Home Buyers

Campaign: Probate Video Views — Dallas

Action: QA Ready

Notes: 3 ad sets, targeting Dallas DMA, daily budget $20/set, all creatives approved

Onboarding

Format

/update Onboarding

Client: [client name]

Step: [exact step name]

Status: [Complete | In Progress | Not Started]

Notes: [details]

Valid Steps:

- **Account Access:** Business Portfolio Access, Ad Account Visible, Facebook Page Confirmed, Instagram Connected, Meta Ads App Installed.
- **Lead Setup:** Leads Access Confirmed, Lead Notifications Set, Lead Centre to CRM, Lead Destination Confirmed, FB Lead Centre Connected.
- **Videos:** Video Brief Sent, Videos Received, Approved Videos Exist.
- **Campaign Launch:** Campaign Built, QA Passed, Campaign Launched, Launch Notification Sent.
- **Master:** Onboarding Complete.

Example

/update Onboarding

Client: Quick Home Buyers

Step: Ad Account Visible

Status: Complete

Notes: Ad account ID 1234567890 confirmed visible in Business Manager

Pipeline

Format

/update Pipeline

Client: [client name]

Deal: [deal/lead name]

Stage: [see valid values below]

Notes: [details]

Valid Stage values (11 total): Conversation – Positive, Follow Up / Reschedule, Booked, No Show, Cancelled, NDM (No Decision Made), Proposal – Decision Pending, Ghosted, Signed – Invoice Sent, Won, Lost.

Example

/update Pipeline

Client: Apex Homes — Marcus Johnson

Deal: Apex Homes

Stage: Booked

Notes: Discovery call scheduled for Monday 2pm ET via Calendly

Optimization

Format

/update Optimization

Client: [client name]

Campaign: [campaign name]

Action: [Review Complete | Budget Change | Creative Swap | Audience Update | Paused | Restarted]

Notes: [what changed and why]

Example

/update Optimization

Client: First Integrity Home Buyers

Campaign: Inherited Property Video Views — Houston

Action: Budget Change

Notes: Increased daily budget from $20 to $35 — CPV at $0.02, strong engagement

Finance

Format

/update Finance

Client: [client name]

Action: [Payment Received | Invoice Sent | Payment Overdue | Refund Issued]

Amount: [dollar amount]

Notes: [details]

Clients

Format

/update Clients

Client: [client name]

Action: [Info Update | Issue | Escalation | Note]

Field: [which field changed, if applicable]

Value: [new value, if applicable]

Notes: [details]

Agent-to-VA Message Format

When the agents post structured messages to you, they look like this:

> **Campaign Intelligence Agent — task assignment**
>
> □ /task Create Retargeting Audiences
>
> Client: Quick Home Buyers
>
> Page: Quick Home Buyers FB Page (ID: 123456789)
>
> Audiences: 25% Viewers, 50% Viewers
>
> Lookback: 30 days
>
> Threshold: Minimum 1,000 video views before creating
>
> Deadline: 48 hours
>
> Notes: Video Views campaign has 2,400 views after 5 days. Ready for first retarget layer.

Your action: Go to Ads Manager → Audiences → Create Custom Audience → Video → use the exact specs above. When done, post a /update Tasks message.

> **Operations Agent — daily briefing**
>
> □ /briefing Daily Ops — May 2, 2026
>
> Active Clients: 4
>
> Tasks Due Today: 3
>
> Overdue Tasks: 1
>
> Onboarding Stuck: First Integrity Home Buyers — Step: Lead Centre to CRM (In Progress for 5 days)
>
> System Health: All workflows green

Your action: Read and acknowledge with □. If anything is yours, take action.

Common Mistakes — Don't Do This

- ✗ Free-form: "Hey I finished the campaign for QHB, it's the probate one in Dallas, 3 ad sets" — won't parse, no record updated.
- ✗ Abbreviated client name: "Client: QHB" — won't match SmartSuite. Use the exact full name.
- ✗ Made-up status value: "Status: Finished" — must be an exact SmartSuite dropdown label.
- ✗ Multiple updates in one message — post each as a separate /update.
- ✗ Ignoring agent specs — if Campaign Intelligence says 25% / 50% with 30-day lookback, don't use 75% / 14-day.
- ✗ Posting structured /update messages in #client-<client> — never. Those are client-facing.

What Happens After You Post

11. SmartSuite Sync Agent reads your message within 60 seconds.

12. It parses the fields, finds the matching record, updates it.
13. Bot reacts ✅ if processed successfully.
14. Bot reacts ⚠ if it can't parse — check your format and repost.
15. If you see ⚠, review your message against this SOP and post a corrected version.

Cheat Sheet

The 5 things you need to remember

1. Use #team-operations for cross-client. Use #team-<client> for one-client work. Never post /update in #client-<client>.
2. Every status update goes through a /update message — never free-form.
3. Client names = exact match to SmartSuite. Status values = exact dropdown label.
4. ⚠ = fix and repost.
5. When in doubt, ask in #team-<client> as a question (no /update). Threads, not main channel.
